

Scottsville Road Interchange

In order to make the pavement markings more conspicuous on the new Scottsville Road bridge, crews will be installing an enhanced form of pavement striping known as thermoplastic. This striping is thicker than its paint counterpart and will provide more contrast on the concrete bridge deck. Beginning Monday night, May 13th, extending through the morning of May 17th, striping crews will begin placing thermoplastic pavement markings at this location. Operations are expected to begin at 7 PM and will continue through the night until approximately 7 AM.

Lane closures will be utilized for the placement of the pavement markings. On Scottsville Road, from 7 PM to 9 PM there will be two lanes in each direction with turn lanes, and from 9 PM to 7 AM there will be one lane of traffic open in each direction with turn lanes. The minimum lane width will be 11 feet. Beginning at 9 PM, there will be one left turn lane open on each exit ramp from I-65 on to Scottsville Road.
